

The well-known dairy from Bavaria being client of project A&E GmbH

The well-known dairy from Bavaria remains being client of project A&E and using the Carry handle despite their new design packaging

The regional well-known dairy located in Munich has decided to continue using the quality of project Automation & Engineering GmbH despite the product changeover.

The milk-processing company bought for seven years the first PROGRIP handle applicator. Provided with this carry handle, a 6-pack of one liter bottle contained in paper packaging can easily be transported and handled by customers. Four years later, the client changed the design packaging to a shrinking foil packaging but remains using the carry handle.

Our company philosophy is based on tradition, best quality and pleasure:

To get the best product, the interaction between the technique and the flow in the process production must also be optimal and reliable.

Because of the quality and reliability of PROGRIP as well as the customer satisfaction, the choice for PROGRIP was evident.

The client also directly decided to use a PROGRIP Eco with the new and steeled design.

After more than tree three years of satisfaction, it's a pleasure to announce that the client is still satisfying and feeling confident in the PROGRIP's quality.
