

The new packaging - Banderole instead of shrink foil

Once more project A&E proves their innovative strength and underlines the leadership aspiration in the packaging sector.

With the new packaging: PROsmart individual products can be packed to a very tight package unit using a banderole. Due to the PROsmart – technology of project, it's also possible to form a stable package unit of individual products provided with a handle attachment

PROsmart is...

Eco friendly

PROsmart reduces the package waste and relieves the environment by saving resources and material. The packaging waste rate is less than 75% per packaging!*

Costs saving

Saving of waste management costs by the German dual system through the usage of considerably less material. In opposite to foil packaging, the use of energy by producing a packaging with the banderole requires only a fraction of the amount of the energy used before.*

Smart Handling

The transport handling of the new PROsmart packaging provided with a convenient handle attachment is greatly comfortable. The practicable pull tap makes the opening of the packaging easy and handy.

Various & flexible

Bottles or other goods from the food and non-food field can use the new technology to form a package unit. The banderole can consist of different materials, handle attachments and banderoles can be printed for marketing purposes.

**Visit us at the interpack 2017 in
Düsseldorf: Hall 5, booth 5J29**

Beside the innovative PROsmart, you will find the well-known handle attachment applicator PROGRIP as well as the robot and the conveying technology at our booth.

We are looking forward to seeing you!

*Compared to a conventional produced sixpack
